## Computation of Grade Point Average

Each course in the student's program is assigned a credit value, usually on the basis of one credit for each hour per week of classroom work.

The number of grade-points per course is determined by multiplying the number of credit points associated with the grade the student has achieved by the credit value assigned to the course.

The Grade-Point average is then determined by dividing the total number of grade-points accumulated by the total number of credits undertaken. Every student's record will contain a computation of the Grade-Point Average for each term individually (Term GPA), and an accumulated Grade-Point Average for the overall program from one term to the next (Program GPA).

Please visit Policy 2000-1-4 on [www.mylambton.ca](http://www.mylambton.ca) for a detailed example of grade point calculation.

### Example:

Letter Grade	Grade Points	Credit	Weight	
A	4	x	3	= 12
B	3	x	3	= 9
B-	2.7	x	2	= 5.4
C+	2.3	x	4	= 9.2
			12	35.6

Grade Point Average:  $(35.6/12) = 2.97$
